 - a. Blood to blood contact
 - b. Splashes in the mouth, eyes, mucous membranes, or on broken skin
 - c. All of the above
7. You could be exposed to bloodborne pathogens through a healing cut, hang nail, or a burn?
True or False
8. Potentially infectious materials include:
 - a. Fluid found around the heart, lungs, and abdomen
 - b. Blood, semen, vaginal secretions, and saliva
 - c. Any body fluid you cannot identify
 - d. All of the above
9. How soon do you report an Occupational Exposure?
 - a. Within ten(10) days
 - b. Within 24 hours
 - c. Never
10. Name one piece of PPE that must be worn to protect against transmission of Bloodborne Pathogens _____.

Answer Key

“Bloodborne Pathogen Review”

- Workers in this job classification are considered “Occupationally Exposed”: **Maintenance, Sanitation, ERT.**
- Bloodborne Pathogens are microorganisms that are present in human body fluids and can cause disease in humans
 True or False
- If you come into contact with an injured co-worker, who is the first person you need to call?
 - Emergency Response Team**
 - Co-Worker
 - Your Resource
- Using “Universal Precautions” means:
 - Treating all blood and body fluids as though they were infectious**
 - That all workers who are exposed to blood borne pathogens follow the same set of work procedures
 - Careful hand washing along with the use of gloves and masks
- An exposure incident is defined as:
 - Any incident that is associated with a first aid injury
 - Specific eye, mouth, mucous membrane, or parenteral skin contact with blood or potentially infected body fluids**
 - The time it takes to receive the Hep B vaccine
- Which modes of transmission could expose you to bloodborne pathogens?
 - Blood to blood contact
 - Splashes in the mouth, eyes, mucous membranes, or on broken skin
 - All of the above**
- You could be exposed to bloodborne pathogens through a healing cut, hang nail, or a burn?
 True or False
- Potentially infectious materials include:
 - Fluid found around the heart, lungs, and abdomen
 - Blood, semen, vaginal secretions, and saliva
 - Any body fluid you cannot identify
 - All of the above**
- How soon do you report an Occupational Exposure?
 - Within ten(10) days
 - Within 24 hours**
 - Never
- Name one piece of PPE that must be worn to protect against transmission of Bloodborne Pathogens: **gloves, aprons, glasses, goggles, face shields**
